

The background of the central section is a close-up photograph of a large pile of crumpled and broken plastic waste, including clear and blue fragments. A dark grey rectangular box is centered over this image, containing the text 'Plastic Balers' in white.

Plastic Balers

Your comprehensive guide to buying or renting a plastic waste baler

Best-selling plastic film balers

With stringent plastic recycling targets to meet, we often experience high demand for our plastic balers. But due to the diversity and complexity of plastic waste in the UK, it can be hard for organisations to identify exactly which plastic baler will best suit their needs. That's where our waste machinery consultants come in of course.

But if you just want to do some of your own research initially, we've highlighted some of our most popular solutions for this varied application.

Low-Medium Volume

COMPACT PLASTIC BALER – RWM 75

With its relatively small footprint, this compact plastic baler is a neat solution for retailers, warehouses, schools, garages and other SMEs. Suitable for low-medium volumes of waste, it will create plastic film bales of up to 75kg with ease.

Medium Volume

MID-RANGE PLASTIC BALER – RWM 150

For medium volumes of plastic film, the RWM 150 is a popular choice. Used by organisations such as manufacturers, hospitals, distribution and logistics firms, it has a larger loading aperture and will produce tidy bales of up to 150kg.

High Volume

ROBUST PLASTIC BALER – RWM 400

When it comes to handling high volumes of plastic film or slightly tougher materials such as polypropylene bags/sacks, we'd begin by suggesting the RWM 400. This machine is a real workhorse, popular with recyclers and industrial users alike.

Best-selling balers for mixed-rigid plastics

High Volume

COST-EFFECTIVE HEAVY DUTY PLASTIC BALER – RWM 450HD

The most affordable heavy duty baler we stock for tougher, semi rigid plastics, this is a robust machine for medium-high volumes of waste. Capable of producing bales of up to 450kg, this is a popular plastic baler with manufacturers, distribution outlets, recyclers and more.

High Volume

LARGE HEAVY DUTY PLASTIC BALER – RWM 550HD

For particularly bulky or high volumes of semi rigid plastics, the RWM 550HD is an obvious choice. With a robust press force and large loading aperture it can handle even the toughest plastic materials, before producing giant bales of up to 610kg.

Did you know

We don't just supply plastic balers. We service such machines too and stock a range of competitively priced consumables to ensure you create the perfect plastic bale.

We even offer a waste consultancy service to help you achieve a maximum return on investment from your waste handling equipment. It's all part of the service.
